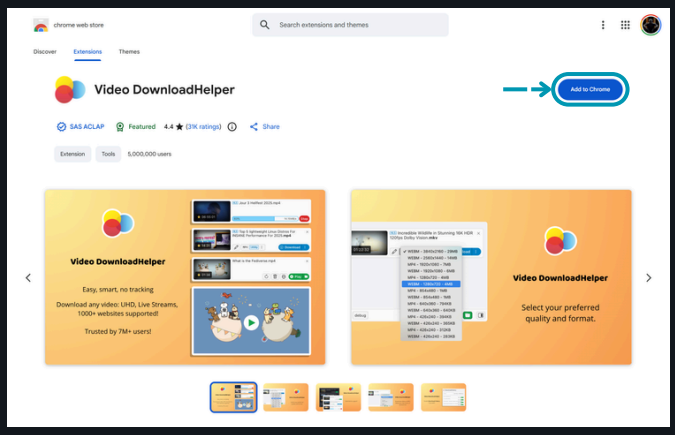
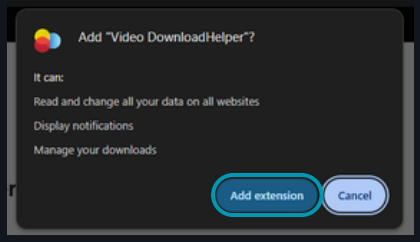
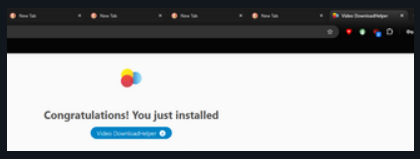
Downloading Videos Using Video DownloadHelper

1. Install the Extension
   - Open the extension page: https://chromewebstore.google.com/detail/video-downloadhelper/lmjnegcaeklhafolokijcfjliaokphfk
   - Click “Add to Chrome” and confirm installation.
   - A new tab may open after installation — this is just a confirmation page and can be closed.

Note:
This extension works well for sites like Vimeo and many others, but it does not support YouTube downloads. For YouTube, you will need to use external websites.

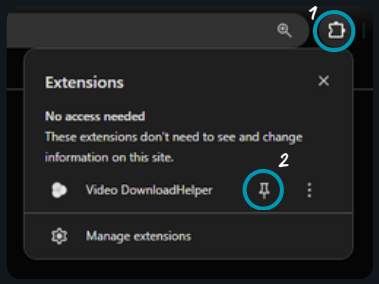




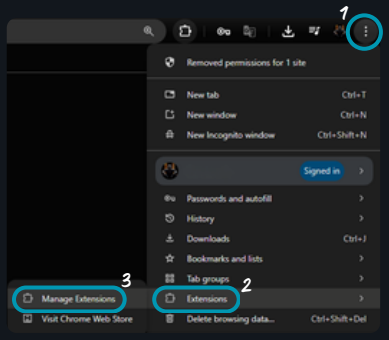


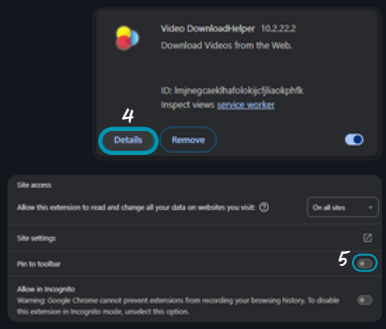
NEXT

2. Set Up the Extension
   - Click the Extensions icon (puzzle icon) in the Chrome toolbar OR go to 3 dots → Extensions → Manage Extensions
     - Find Video DownloadHelper
     - Click the pin icon to keep it visible in the toolbar



OR





NEXT

3. Enable Sidebar (Recommended)
   - Click the extension icon
   - Enable the sidebar view

   This makes it easier to monitor and manage downloads, especially when working with multiple tabs.

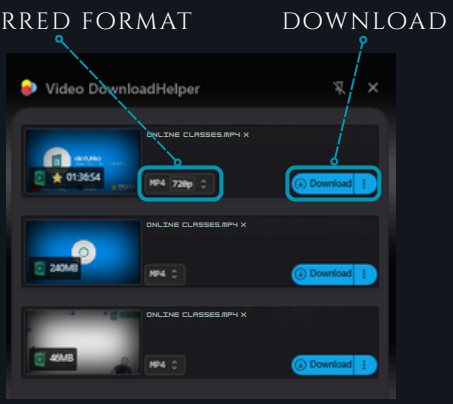
This PDF/guide was created by Runarok.

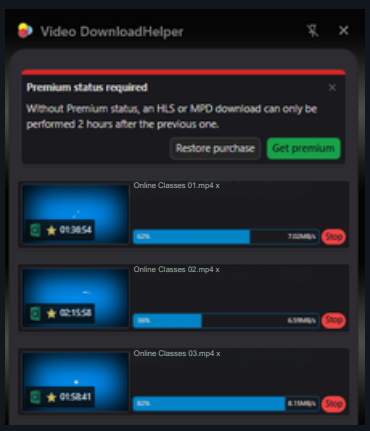
4. Download a Video

- Open the webpage containing the video
- Let the page fully load
- Click the extension or open the sidebar
- If the video is detected, a download option will appear
- Select your preferred format and download

If the video does not appear:

- Refresh the page
- Or check whether the site supports downloads



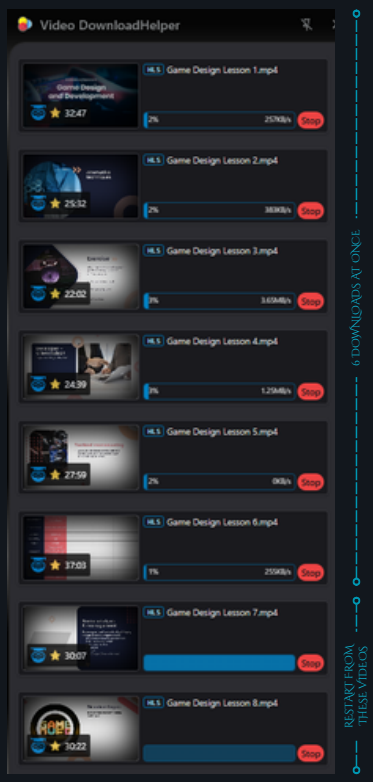


Bulk Download Method (Optional)

This method improves efficiency when downloading multiple videos.

- Open each video in a separate tab
- (Example: 5 videos = 5 tabs)
- Wait for all tabs to fully load
- Open the extension sidebar

You will see download options for each tab. This typically allows downloading around 4–8 videos at once instead of 2 or 3.



NEXT

5. File Naming and Organization

Downloaded videos use the original server-side names, which may not always be clear and can result in duplicates.

It is recommended to:

- Rename files after downloading
- Organize them into folders

NEXT

6. Limits and Reset Method

After repeated use:

- The loading bar may stop working
- Or a download limit may appear

To fix this:

- Make sure all downloads are complete
- Remove the extension
- Reinstall it from the Chrome Web Store

Important: Do not remove the extension while downloads are in progress.

If you want, I can tighten this further into a one-page quick guide or make it more formal depending on where you plan to share it.
