Sync GeeksforGeeks Solutions to GitHub

Step-by-Step Setup

1. Prerequisites

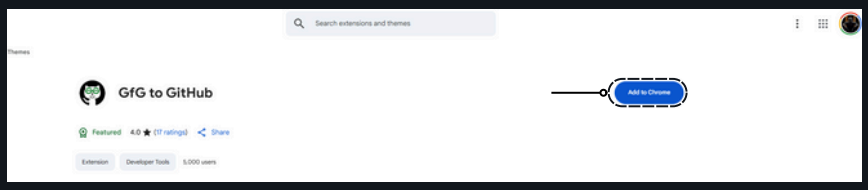
Make sure you have accounts on both platforms:

- Create or sign in to GitHub
- Create or sign in to GeeksforGeeks

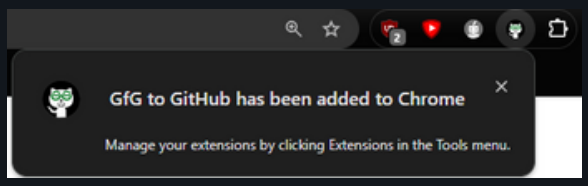
2. Install the Chrome Extension

Go to the official Chrome extension:

- GFG to GitHub – Chrome Web Store
- Click "Add to Chrome"

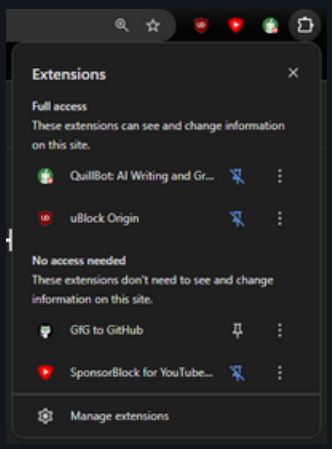


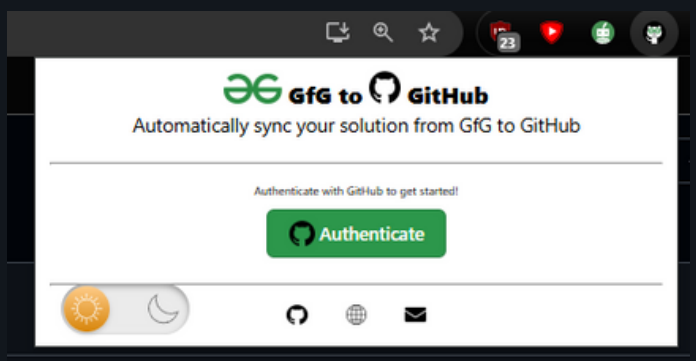
Once added, you'll see the extension icon appear in your Chrome toolbar.



3. Authenticate the Extension with GitHub

- Click the Extensions (puzzle icon) in Chrome → Click "GFG to GitHub"
- A small pop-up opens — click Authenticate
- It will open a new tab to GitHub
- Approve GitHub access to connect your account





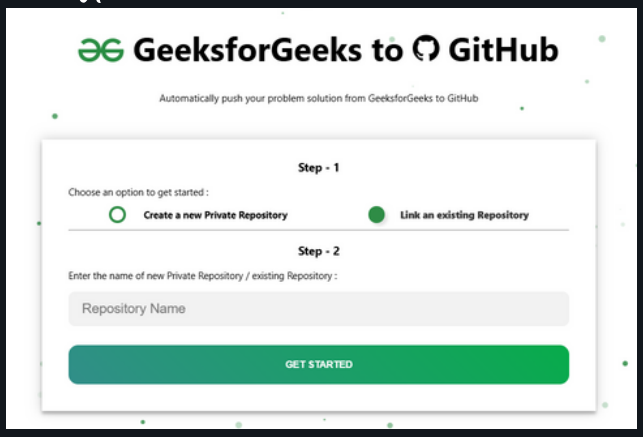
4. Link a GitHub Repository

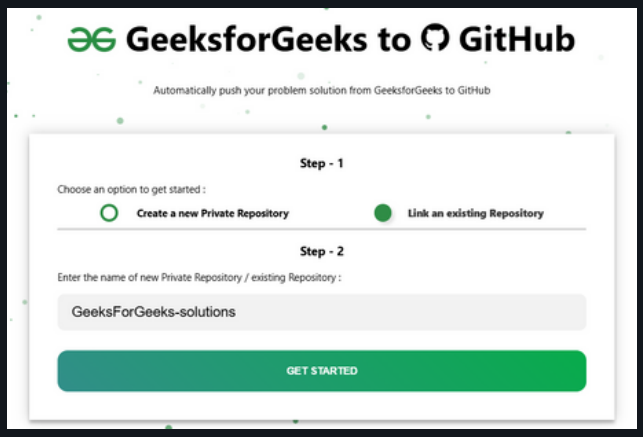
- Now you'll see two options:
  - Create a new private repository
  - Link an existing repository

In my case, I wanted to linked it to:

- [Runarok/GeeksForGeeks-solutions]

So I just typed: GeeksForGeeks-solutions





You will see a message like:

- Successfully linked Runarok/GeeksForGeeks-solutions to 'GfG To GitHub'. Start solving on GeeksforGeeks now! Linked the wrong repo? → Unlink.

5. Start Solving — It Auto Uploads!

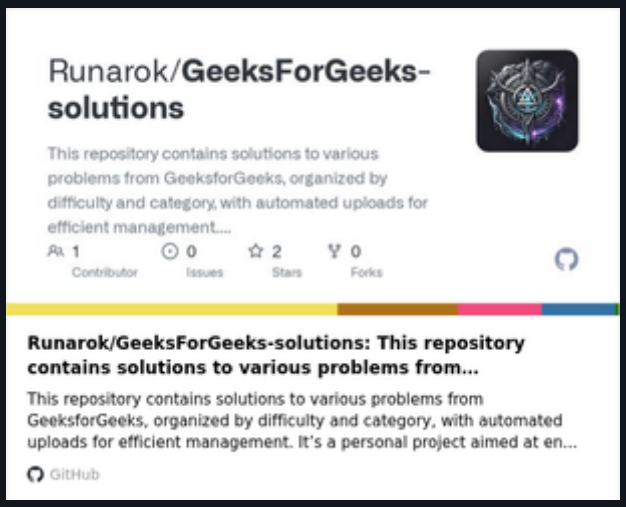
Now just:

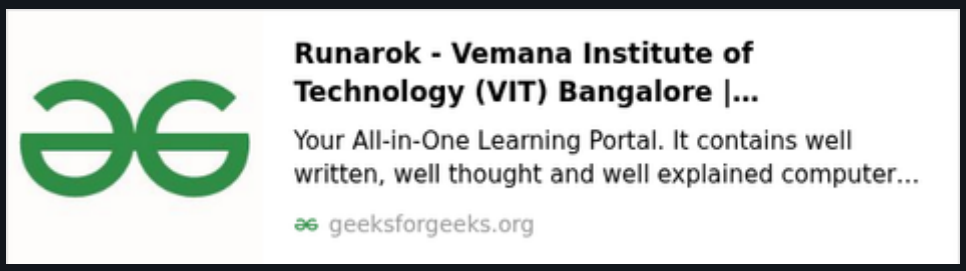
- Solve a problem on GeeksforGeeks
- Once submitted successfully:
  - The extension will automatically push the solution to your linked GitHub repo
  - Files will be neatly named and added to language-specific folders

Note: Wait about 30 seconds after solving before refreshing GitHub — it usually pushes within that time
(Just don't refresh GFG instantly — let it sync first)

Track Your Growth Publicly

- Check out an example of how an organized, synced repo looks:
  - GeeksForGeeks-solutions





- And my GFG profile if you're curious:
  - geeksforgeeks/runarokhrafn
